

Duffin Creek Water Pollution Control Plant EA

Project Description:

The Duffin Creek Water Pollution Control Plant (WPCP) treats wastewater collected from portions of York Region and Durham Region. Based on projected population and employment growth, the Regions concluded that sanitary sewage flows would soon exceed the existing capacity of the WPCP. To identify a preferred method of providing additional capacity at the plant, the Regions completed a Schedule 'C' Class EA.

HSAL was retained to develop and implement a comprehensive public consultation and communications program. The program included Stakeholder Advisory Committee meetings, evaluation workshops, media and government relations, public opinion polling, and plant tours.

Client: Region of Durham

Location: Pickering, Ontario

Year: 2004 – 2006

Services:

- Facilitation
- Public Consultation
- Communications
