

# East Brampton Twinning SEIA and Issues Management

## Project Description:

The Regional Municipality of Peel conducted a Municipal Schedule 'B' Class Environmental Assessment ('EA') to investigate twinning or constructing a new sanitary sewer line parallel to the East Brampton Trunk Sewer ('EBTS'). The sewer services a portion of northeast Brampton and the Town of Caledon. The project is critical to maintaining sewage service efficiencies and to expand capacity to support Peel Region's growth.

As part of this assignment, HSAL prepared a Socio-economic Impact Assessment ('SEIA') study of the alternative sewer alignments, as well as a Communications and Issues Management Plan ('CIMP') to guide Associated Engineering, the lead contractor, and the Region of Peel during the EA.

**Client:** Region of Peel

**Location:** Brampton, Ontario

**Year:** 2013 - ongoing

### Services:

- Socio-economic Impact Assessment
- Communications
- Issues Management
